

Liz is a biomedical engineer. In May 2011, Elizabeth served as Principle Investigator for a preliminary clinical study conducted at the Yale Medical School titled, "Investigating the Usability of a Handheld 3D Dermatoscope". She serves as a liaison between 3Derm and local dermatologists, and works closely with business mentors who advise 3Derm on all corporate and commercial matters.

Current average wait time to see a dermatologist: 29 days. Elizabeth Asai founded 3Derm to solve that with telemedicine. Primary care doctors take diagnostic-quality images that are sent to dermatologists for remote review and, if necessary, in-person follow-up. 3Derm's Medicaid patients now have 20x faster access to care.
